

PCT BEAR BAG HANGING TECHNIQUE

Step 0: Find a stick 2 ft – 5 ft long, about 0.5" diameter.

Step 1: Put a rock or gravel/sand in a rock sack and throw it over a branch 18 -26 ft high.

Step 2: Clip the rock sack side of the line into the SuperFly Mini Biner.

Step 3: Pull the rock sack line to pull the food bag up to the branch.

Step 4: Reach up over your head and tie the line around the stick. Use a girth hitch or clove hitch.

Step 5: Lower the bag until the stick jams at the Mini Biner suspending the bag at least 8 ft off the ground...10 ft is better for tall Grizz.

Step 6: Reach over your head and stuff the left-over line into the rock sack and cinch it closed.

BAG RETRIEVAL

Pull the line down, un-clip the line from the Mini Biner, snap the stick to release the knot and lower the bag slowly. Watch your head.

NOTE: Clip the Mini Biner or tie the line through the buckle DO NOT tie the line over the buckle or it can slip to the side and abrade the buckle-to-bag connecting strap.

Pictured above is the set up to use the PCT Method. You will notice the Mini Biner is wide end up to create a deeper area on the biner's main orange body for the stick to jam against and not cross-load the wire gate. Using a larger stick can press on the wire gate sideways and damage the Mini Biner. A pencil size stick is perfect.
